

# Children and Using an AED

---

- You can use an AED on children
- Most AED's come with child pads, which either are pink or have a panda on them.
- If there are no child pads available you can use adult pads: however, you will need to adjust the placement.
  - You need to put a pad in the center of the chest, then a pad on the back (left side oriented).
- Follow the voice prompts.

**CHILD AED ELECTRODE  
PADS**

**Correct placement**
